Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Macdonald, A.L. 1991. The Indian food fishery of the Fraser River: 1990 summary. Can. Data Rep. Fish. Aquat. Sci. 836: 105 p.

Estimates of weekly effort levels, catches, and catch per unit of effort of five species of Pacific salmon and steelhead (**Oncorhynchus** spp.) and sturgeon (**Acipenser** spp.) are reported for all 23 fishing areas of the Fraser River Indian food fishery in 1990. The annual catch of 853,489 salmon and steelhead was the highest on record. The catch by species was 17,885 chinook salmon (**O. tshawytscha**), 807,618 sockeye salmon (**O. nerka**), 13,633 coho salmon (**O. kisutch**), 13,833 chum salmon (**O. keta**), 520 steelhead (**O. mykiss**), and 5,815 sturgeon. A standard management plan was amended because conservation was required for early, middle and late run chinook stocks, Early Stuart River sockeye salmon, and Thompson River steelhead. For the first time since 1985, a management plan was implemented without a sockeye salmon allocation.

Key words: Indian food fishery, Fraser River, effort, catch, conservation.

RÉSUMÉ

Macdonald, A.L. 1991. The Indian food fishery of the Fraser River: 1990 summary. Can. Data Rep. Fish. Aquat. Sci. 836: 105 p.

On présente les niveaux d'effort hebdomadaire, les prises, et les prises par unité d'effort pour cinq espèces de saumon du pacifique et la truite arc-en-ciel anadrome (genre **Oncorynchus**) et esturgeon (genre **Acipenser**), ceci pour les 23 zones de pêche touchant la pêche de subsistance des autochtones dans le fleuve Fraser en 1990. Une capture annuelle totale de 853 489 saumons et truite arc-en-ciel anadromes représente les plus importance jamais enregistrée. Les prises par espèces ont été les suivantes: 17 885 saumons quinnats (**O. tshawytscha**), 807 618 saumons rouge (**O. nerka**), 13 633 saumons coho (**O. kisutch**), 13 833 saumon ketas (**O. keta**), 520 tuites arc-en-ciel anadromes (**O. mykiss**) et 5 815 esturgeons. Un plan de gestion standard a été modifie pour préserver les stocks des remontées hâtives et estivales du quinnat, la remontée hâtive du saumon rouge de la Stuart et la truite arc-en-ciel anadrome du Thompson. Pour la première fois depuis 1985, le plan de gestion ne prevoit pas d'allocation pour le saumon rouge.

Mots-cles: pêche de subsistance des autochtones, fleuve Fraser, effort, prises, conservation.

INTRODUCTION

Management plans for the Fraser River Indian food fishery (IFF) in 1990 and estimates of resultant effort, catch, and catch per unit of effort (CPUE) of salmon and steelhead (*Oncorhynchus* spp.) and sturgeon (*Acipenser* spp.) are documented in this report. Management plans and salmonid catch, effort, and CPUE estimates for the IFF for the 1951 to 1982 period were compiled by Schubert (1983) and have been published annually since 1983 (Schubert 1984, 1985, 1986; Macdonald 1987, 1988, 1989, 1990).

This report provides a brief description of fishing areas and gear, an overview of management processes, an annual catch summary, details of data organization and interpretation, management plans, and tabulated estimates of weekly effort, catch, and CPUE by the IFF in 1990.

FISHING AREAS AND GEAR

The Fraser River watershed is divided into 23 areas to facilitate data collection and documentation. Areas are delineated by the locations described briefly below and shown in Fig. 1. The watershed is divided into two administrative districts by the Department of Fisheries and Oceans (DFO). Districts 1 and 2 represent, respectively, all areas upstream and downstream of North Bend. The following descriptions indicate the distance of the area boundaries from Steveston (near the mouth of the Fraser River) in brackets and gear types used in each area.

Steveston Area (below 9.6 km); drifted gill nets. The North Arm of the Fraser River downstream of the Knight Street bridge; the Middle Arm of the Fraser River between Swishwash and Lulu Islands; and Ladner Reach, Sea Reach, and Canoe Passage in the Main Arm of the Fraser River. Beginning July 27, 1990, the fishing area was expanded to include the Main Arm of the Fraser River from the downstream end of Woodward's Island to the downstream end of Deas Island.

Deas Island (9.6 km) to Mission (75 km); set gill nets. The main arm of the Fraser River from the westerly end of Deas Island upstream to Mission; and the North Arm of the Fraser River upstream from the Knight Street bridge.

Mission (75 km) to Hope (151 km); set gill nets. Prior to 1987, data for this area was compiled for north and south side sub-areas of the mainstem, each extending from Mission to Hope. Since 1987, the north and south side sub-areas have been combined for data collection and documentation.

Hope (151 km) to North Bend (206 km); set gill nets. This area encompasses a permanently closed 8 km section of the Fraser River that extends from Williams Creek (191.5 km), 2.8 km south of Hell's Gate, to Petch Creek (199.5 km), 5.2 km north of Hell's Gate. The closed area protects salmon stocks passing an obstruction at Hell's Gate.

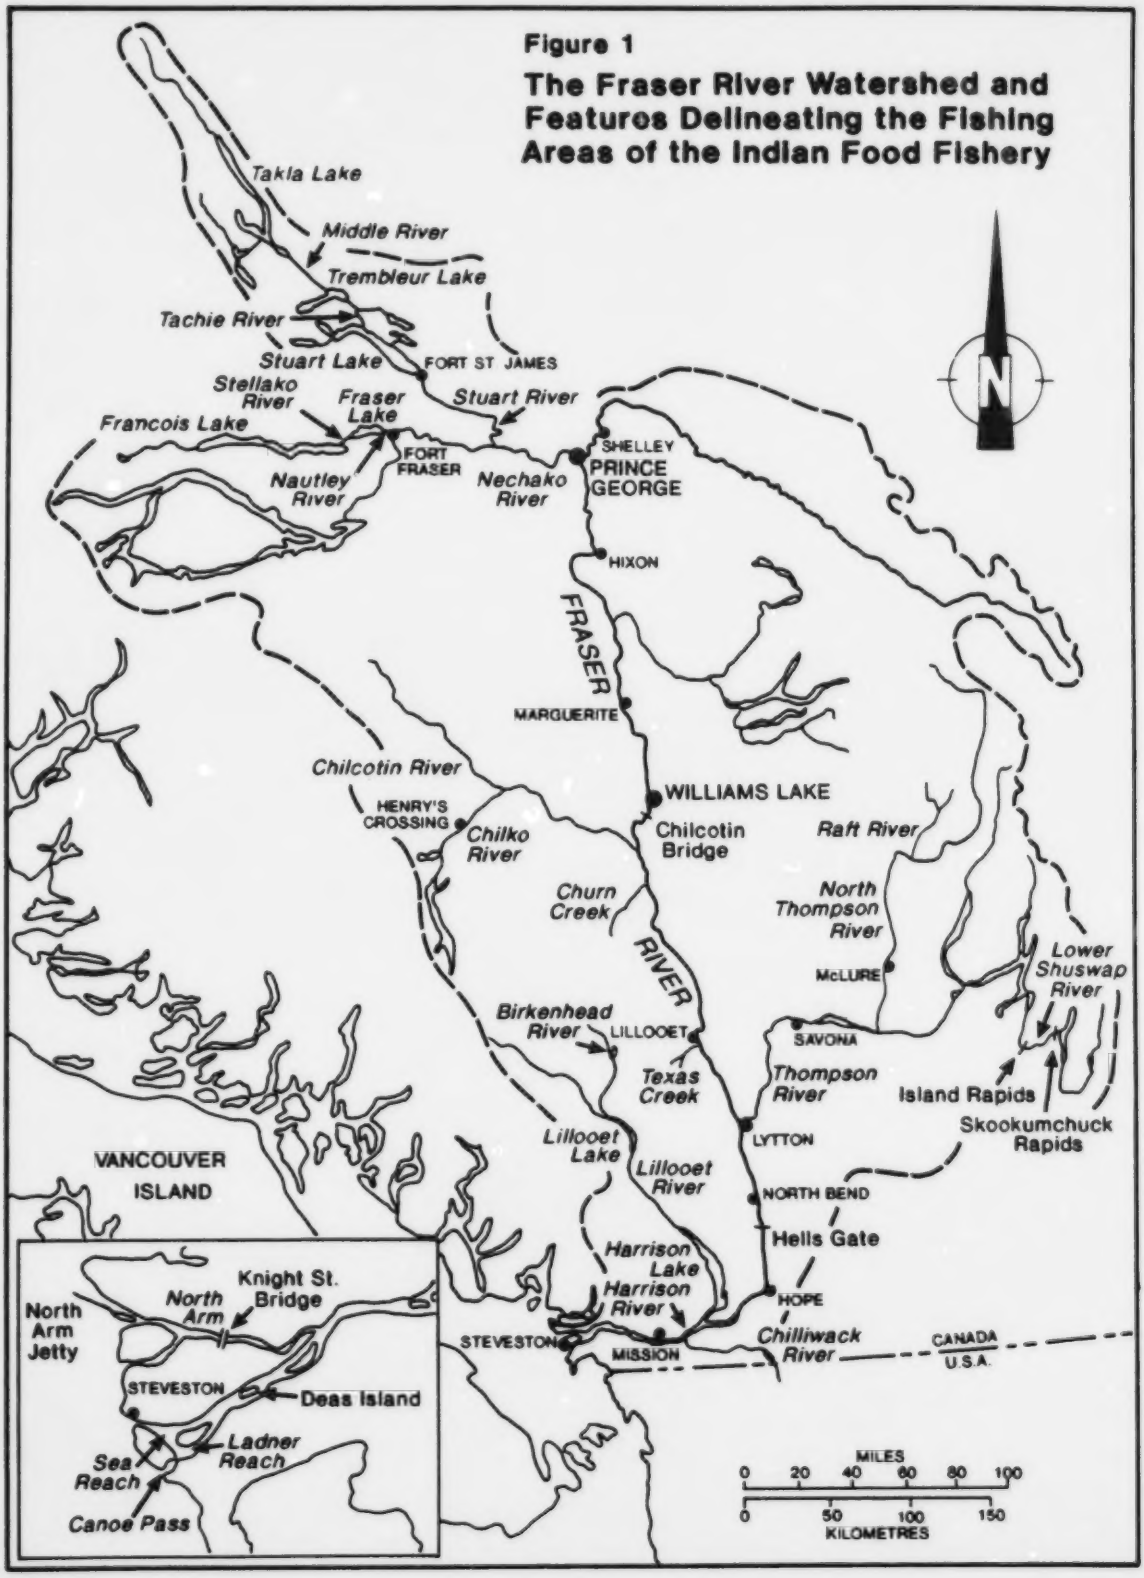
North Bend (206 km) to Texas Creek (280 km); set gill nets and dip nets. Prior to 1976, this area was North Bend to Lytton (236 km). Texas Creek flows into the Fraser River 18 km south of Lillooet.

Texas Creek (280 km) to Churn Creek (430 km); set gill nets and dip nets. Prior to 1976, this area was Lytton to Churn Creek.

Churn Creek (430 km) to Chilcotin Bridge (491 km); dip nets. Chilcotin Bridge (also known as Sheep Creek bridge) crosses the Fraser River 20 km south of Williams Lake.

Figure 1

The Fraser River Watershed and Features Delineating the Fishing Areas of the Indian Food Fishery



Chilcotin Bridge (491 km) to Marguerite (552 km); dip nets.

Marguerite (552 km) to Hixon (689 km); dip nets.

Above Hixon (689 km); set gill nets. Fishing in this area is conducted in the Fraser River between Hixon and Prince George (768 km) and at Shelley (773 km). No fishing occurs in the mainstem or tributaries of the Fraser River upstream of Shelley.

Nechako and Stuart River Systems; set gill nets. These two systems are divided into six sub-areas as follows:

a. Nechako River

- Prince George (768 km) to the Stuart River mouth (855 km).
- Stuart River mouth (855 km) to Fort Fraser (958 km), including the Nautley River.
- Fort Fraser (958 km) to Francois Lake (990 km). Fishing occurs along the shore of Fraser Lake adjacent to the reserves at Lejac and the Fraser Lake town site, and in the lower 200 m of the Stellako River.

b. Stuart River

- Stuart-Nechako river confluence (855 km) to Fort St. James (967 km). Most fishing occurs at the outlet of Stuart Lake.
- Fort St. James (967 km) to the Trembleur Lake outlet (1,035 km). Fishing occurs principally in the Tachie River at Grand Rapids and in Trembleur Lake adjacent to the Tachie River mouth.
- above the Trembleur Lake outlet (1,035 km). Fishing is conducted at the mouth of the Middle River.

Chilcotin River System

- Chilcotin River; from the Fraser River (460 km) to the Chilko River confluence (549 km); dip nets.
- Chilko River; from the Chilcotin River confluence (549 km) to Henry's Crossing (628 km); dip nets and gaffs.

Thompson River System

- Thompson River; Lytton (254 km) to Savona (368 km); set gill nets and dip nets.
- Shuswap River; from the Islands (610 km) to Skookumchuk Rapids (653 km); spears and gaffs.
- North Thompson River system; North Thompson mainstem above McLure (413 km); set gill nets; and in the Raft River (545 km); spears and gaffs.

Harrison-Lillooet River System

- Harrison River; mainstem (from 102 km to 121 km); set gill nets and spears.
- Lower Lillooet River; head of Harrison Lake (182 km) to the Lillooet Lake outlet (240 km); set gill nets.
- Birkenhead River (268 km); includes a set gill net fishery at the upper end of Lillooet Lake and a gaff fishery in the Birkenhead River.

1990 CATCH

Catches of salmon and steelhead by the IFF are presented by year from 1951 to 1990 in Table 1 and by area

Table 1. Annual salmon and steelhead catch by the Fraser River Indian food fishery, 1951 to 1990.

Year	Chinook	Sockeye	Pink	Coho	Chum	Steelhead	Total
1951	9,092	85,043	6,385	3,980	5,827	2,313	112,640

Total	17,885	100	807,618	100	13,633	100	13,833	100	520	100	853,489	100

for 1990 in Table 2. The total annual catch of 853,489 salmon and steelhead in 1990 was the highest of the 1951-90 period. The chinook catch of 17,885 fish was 7% above the 1981-90 average. The catch of 807,618 sockeye was the largest annual catch within the 1951-90 period and represented 95% of the salmon total. The large increase in sockeye catch was the result of a change in IFF management coupled with the largest return to the river on the cycle since the early 1900's. The catch of 13,633 coho was only 50% of the 1981-90 average. The chum catch of 13,833 fish was also below the recent average. The steelhead catch of 520 fish was the lowest since 1978 and the second lowest in the 1951-90 period.

The majority of the total catch in 1990 was taken in the mainstem of the Fraser River downstream of North Bend (75%). The greatest proportion of catch of any area in the fishery occurred between Mission and Hope (32%) and Hope and North Bend (29%).

MANAGEMENT PROCEDURE

The IFF is regulated to conserve the salmon resource and provide fishing opportunities for food purposes. A standard fishing plan (Table 3a) is used as a basis for management of the fishery, and has not changed significantly since 1962. Prior to 1986, and for the 1990 season, two regulatory measures were used in the management procedure: restrictions of fishing times and restrictions in the type and characteristics of gear. The durations of weekly open periods vary within the fishery because stock abundances and gear efficiencies differ between areas. For example, the fishery between Deas Island and North Bend is open for three days per week because most Fraser River stocks of all five salmon species and steelhead are available to the relatively efficient gear used in this area. In comparison, the fishery between Churn Creek and Hixon and in the Chilcotin River system is open seven days per week because the number of salmon species, and abundance and seasonal occurrence of stocks are considerably reduced. Additionally, the dip nets used in these areas are less efficient than set gill nets used in the lower parts of the river, and the number of fishing sites may be limited. Gear restrictions apply to the type and characteristics of gill nets and are used as a method of limiting net efficiency which cannot be compensated for by varying the duration of openings. For a four year period from 1986 to 1989, an annual allocation of 500,000 sockeye was established for the entire fishery in addition to time and gear regulations. Allocation management in the IFF was described by Macdonald (1990).

Each year a pre-season plan is developed by amending the standard plan if conservation or other concerns need to be addressed.

The Interior Indian Fisheries Commission (IIFC) was established to represent the fishing interests of many Indian bands and tribal councils throughout the Fraser River watershed and act as a consultative group for the IFF. The IIFC may consist of representatives from each of the following ten tribal councils: Carrier-Sekani Tribal Council, Cariboo Tribal Council, Chilcotin-Ulkatcho-Kluskus Nation, Lillooet Tribal Council, Nlaka'Pamux Tribal Council, Okanagan Tribal Council, Kootenay Indian Area Council, Sto:Lo Nation, and Sto:Lo Tribal Council. Consultations also occur between DFO and individual bands or groups not affiliated with the IIFC.

1990 PRE-SEASON MANAGEMENT PLAN

The pre-season plan for the IFF is shown in Tables 3b and 3c. Early and middle runs of chinook, the late timed Harrison River chinook stock, and Early Stuart sockeye required conservation for the 1990 season. Three management actions were taken in an attempt to reduce catches from these stocks:

1. For early timed chinook, fishing times in the mainstem of the Fraser River downstream from North Bend, the major area of chinook interception, were reduced to one day per week during the chinook-directed fishery between late February and late June. Similar conservation measures for this run have been implemented annually since 1977. In the Lillooet River system, fishing times were reduced to one day per week from April to mid-June, the fifth consecutive year for such restrictions in this system;

2. For middle run and Harrison River chinook stocks, a restriction was placed on the mesh size of gill nets to a maximum of 140 mm (5.5 inches) to reduce incidental interceptions of chinook during the sockeye-directed fishery. This was the eighth consecutive year of mesh size restrictions for middle run chinook and the second year of such a restriction for Harrison chinook.

3. A three week closure was planned throughout the IFF except in the Stuart River system to maximize the spawning escapement of Early Stuart sockeye from a total run forecast of 125,000 fish. No other fisheries were scheduled to catch early Stuart sockeye. The interim escapement goal for this stock in 1990 was 150,000 fish.

IN-SEASON AMENDMENTS

During the season, changes were made to the plan to respond to an Early Stuart sockeye run size change and various concerns of native groups. The record of actual management actions taken is provided in Tables 3c (gear regulations) and 3d (fishing times). Rationale for in-season changes, ordered chronologically, was as follows:

June - Additions of 24 hours in the Steveston area and two days between Deas Island and North Bend were provided in the June 11 to June 24 period as a compensation measure for the impending three week closure to conserve Early Stuart sockeye.

July - On July 11th, the estimated run size of Early Stuart sockeye was increased by the Pacific Salmon Commission (PSC) to 200,000 fish from the pre-season forecast of 125,000 fish. The increase in run size provided an opportunity to raise the spawning escapement level to the goal of 150,000 and increase catches by the IFF. No commercial openings were planned at the increased run size. The pre-season IFF plan was amended to harvest additional sockeye by reducing the closure to two weeks and scheduling a restricted fishery to replace the third week of the closure (Table 3d). A total catch of 45,000 Early Stuart sockeye was expected as a result of these in-season changes.

In late July, as a result of negotiations between DFO and the Musqueam and Tsawwassen Indian bands, three elements of the pre-season fishing plan in the Steveston area were amended: 1) weekly fishing times were changed from 1 day/wk to 1.5 days/wk; this change conformed

times were changed from 1 day/wk to 1.5 days/wk; this change conformed with the overall IFF management change to a standard plan; 2) the drifted gill net length was increased from 25 fathoms to 50 fathoms; and 3) the fishing area was expanded to include the mainstem of the Fraser River from the downstream end of Woodward's Island to the downstream end of Deas Island.

August and September - Fishing times of the commercial gill net fishery in the Fraser River (Statistical Area 29) were increased in-season to two days/wk for five consecutive weeks from early August to early September. Two adjustments were made in IFF plans in response to the commercial openings: 1) the weekly schedule of IFF fishing times in the Deas Island to Mission area was changed from Monday-Thursday openings to Thursday-Sunday openings to avoid concurrent commercial and IFF openings; and 2) a total of 3.75 additional days were provided (between August 6 and September 16) in the area from Deas Island to North Bend to compensate for Area 29 commercial fishery impacts which reduced sockeye abundance.

The Nlaka'Pamux Nation Tribal Council (NNTC), which represents bands in the areas from North Bend to Texas Creek in the Fraser River and from Lytton to Spences Bridge in the Thompson River, requested additional fishing time during the summer run sockeye migration period. This request was implemented and times were increased throughout the summer and late run sockeye season beginning in early August. Changes were also made from Texas Creek to Churn Creek to conform to amendments in the NNTC area since DFO manages both areas the same way.

In late July and early August, a special IFF licence was issued to the Katzie band (for the seventh consecutive year) and catches were taken between Deas Island and Whonnock with a drifted gill net.

As a result of an agreement between DFO and the Sumas band, an experimental drifted gill net fishery (with one net) was conducted in early September between Mission and the Sumas River.

October - In late September a conservation concern for the Thompson River steelhead stock (expressed by the B.C. Ministry of Environment) was addressed in the IFF. Fishing times were reduced to 1 day/wk from the Harrison-Fraser river confluence to North Bend. Reduced times were originally planned to last four weeks throughout the area, but late implementation limited the restriction to three weeks between Harrison River and Hope.

The consultative process established with native groups in past years was continued in 1990. Meetings were held prior to and during the fishing season with various bands, tribes, and other groups to formulate management plans and facilitate in-season changes to these plans.

DATA SOURCES

Effort and catch statistics of the IFF are estimated in each fishing area and compiled weekly by fisheries officers of DFO. Gear counts may be obtained from river, foot or aerial surveys. CPUE and catch may be estimated from interviews with or direct observation of fishermen and by physical inspection of deployed nets. Generally, each area of the fishery is surveyed one or more times during each weekly open period. Catch and effort estimation methods and intensity of assessment are dependent on

may vary between areas and within each area throughout the year.

DATA ORGANIZATION AND INTERPRETATION

The weekly number of open days, daily number of nets, and net-days per week of effort in 1990 are presented by area and gear type in Table 4. The net-days per week of effort were calculated by multiplying the number of days open for fishing each week by the number of nets observed.

All catch data are reported as number of fish (pieces). Annual catches of salmonid species by area for the 1951 to 1990 period are summarized in Table 5. Weekly catches of salmonid species and sturgeon by area in 1990 are presented in Table 6. In Table 6, non-numeric entries represented by hyphens that are not accompanied by a footnote indicate weekly openings when no effort was expended (e.g. no nets present).

Weekly CPUE of each salmonid species and sturgeon by area and gear type in 1990 is shown in Table 7. CPUE was calculated by dividing the total weekly catch by the total weekly effort and is expressed in units of catch per net-day. In the CPUE tables, non-numeric entries represented by hyphens indicate weeks when no effort was expended or effort was not estimated. CPUE was not calculated for the two areas between North Bend and Churn Creek in the mainstem of the Fraser River and the area between Lytton and Savona in the mainstem of the Thompson River because separate estimations of catch for each of the two gear types used in these areas (set gill nets and dip nets) were not reported.

ACKNOWLEDGEMENTS

I thank L. Currie for assisting in preparation of the manuscript format.

Table 7. Weekly estimates of effort and catch per unit of effort (CPUE) by area and gear type in the Fraser River Indian food fishery in 1990:

Steveston 93
Deas to Mission 94
Mission to Hope 95
Hope to North Bend 96
Harrison River 97
Lower Lillooet River 98
Birkenhead River 99
Churn Creek to Marguerite 100
Marguerite to Hixon 101
Above Hixon 102
Nechako River 103
Stuart River 104
Chilcotin River 105

Weekly effort (drift net-days) and CPUE by species in the Steveston area, 1990.
